**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. Claims 24 and 30-57 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 99/57259 in view of Merz, US 3,888,391. The WO discloses fabric care compositions comprising a modified cellulase. Surfactant is typically present at a most preferable range of 1% to 30% by weight (p. 18, 2<sup>nd</sup> para). Cationic softeners are preferred, and include coconut dimethyl hydroxyethyl ammonium chloride, which is disclosed as especially preferred (p 20, bottom). Typical softening components include distearoyloxyethyl dimethyl ammonium chloride (p. 21, 12)). Total cationic content is preferably about 1-8% (p. 23, 2<sup>nd</sup> para.) Addition of silicone antifoaming agents, perfume and HCl in amounts which meet the limitations of applicant's elected composition are exemplified. Note, in particular Example 15 on p. 78, which discloses a DEQA rinse added fabric softener in combination with a suds suppressor. It is well known in the surfactant art that substantial amounts of monoester are present in commercially available DEQA fabric softening compositions, so applicant's recitation of the addition of a surfactant scavenger does not add patentable weight. The presence of the monoester meets the limitation of about 1:1 to 1.6:1 fatty acid:amine. Note the teaching at the 3<sup>rd</sup> full paragraph on p. 16 that the compositions may be used for manual treatment of fabrics and as softening treatments after laundering. The examiner takes the position that this passage may be fairly construed as teaching the use of the disclosed

compositions for softening by hand after laundering. The reference does not disclose the use of such a composition in a first rinse bath.

Merz discloses a dispenser for use in automatic washing machines which is actuated in the first spin which follows the wash cycle. The dispenser opens during this spin and dispenses the contents during the first rinse (abstract). In the first paragraph of the specification, use for dispensing liquid fabric softeners is disclosed. It would have been obvious at the time that the invention was made to use the composition of the WO in the first rinse bath of a manual rinsing process, because the WO discloses that its compositions are useful for rinsing manually, and Merz discloses a device for dispensing liquid fabric softener in the first rinse cycle. As manual rinsing is taught in the first reference, and use of a softening composition in the first bath is taught in the secondary reference, use of a softening composition in the first bath of a manual rinse process can be fairly inferred from the combined teachings of the references.

### ***Response to Arguments***

2. Applicant's arguments are addressed in the final paragraph of the rejection above.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 1751

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
